

IOS. passing data

NSNotification \neq Push Notification
* different way of transferring data

- Delegate, \neq hard binding between VC \rightarrow VC
- Key-value
- Observing
- Seque
- NSNotification : No hard binding
- Target-Action
- Callbacks.

NSNotification to communication

Sending / Receiving feature.

observer argument
using catch Notification

```
NotificationCenter.default.addObserver(self,
    selector: #selector(dothisWhenNotify),
    name: NSNotification.Name(rawValue: myNo),
    object: nil)

- catchNotification(_:) {
    - notification.userInfo
}

NotificationCenter.default.post(name: Notification.Name(
    rawValue: notificationKey, object: self))
```

observing

name of the notification

same

name of Notifia.

sender

Post: userInfo: ["name: " Bob"]
